

The projects developed by the research group are reproduced below in four different sections (only in Italian and Spanish).

You can leave a comment with your suggestions.

Every comment is public and will be examined thoroughly by the members of the group. Only those that do not benefit the scientific purpose of the research will be promptly removed: at any moment, after consulting the members of the steering group, the moderator will therefore remove the comments that are deemed not in line with the spirit and the aim of the project.

Observations, remarks or replies by the research group about the comments will be published in the specific “Replies” section.
